Bellows suction cups VES 34 series

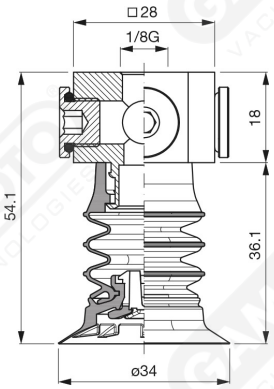

VES series suction cups are designed to be the best solution for the handling of plastic bags and other materials.

They consist of two separate parts assembled together. The soft silicone lip guarantees an excellent grip on the deformable surfaces, while the body, with bellows of higher hardness, guarantees excellent resistance to stress.

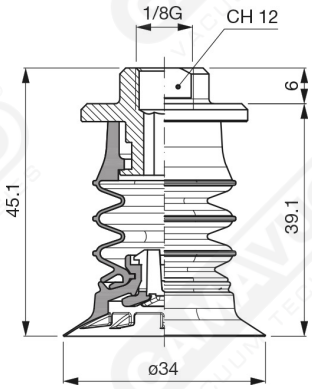

In the available supports, there is the possibility to integrate a stainless steel mesh filter and the self-pressure valve for vacuum flow control.
